CONTENTS

- Double Bubble Glass Terrarium
- Alyssum seed pack
- Forget-Me-Not Plant seed pack
- Germination Disk
- Care Instructions

PLANTING INSTRUCTIONS

- Carefully unwrap your Glass Terrarium and place on a solid surface.
 - Place your germination disk in a separate container. Add 2 1/2 cups of luke warm water. The germination disk will absorb the water and expand into your growing medium.
 - After the disk has absorbed the water carefully use a plastic spoon (not provided) to fill the bottom of your Double Bubble with the germination mixture. Gently use the plastic spoon to push down the growing medium so it is about 1 1/2 inches thick and sits firmly on the base of the glass terrarium. Make sure it does not extend out of the opening. The growing medium should be well moistened but make sure there are no pockets of standing water.
 - Crease a piece of paper and carefully pour seeds on to the paper from the pack, sprinkle half the seeds onto your growing medium as desired. Gently push them into the medium with the plastic spoon. This kit comes with enough seeds for two plantings. Be sure to save half the seeds if you want another planting and store your saved seeds in a cool, dry area without too much humidity.
- *Tip – If you CAREFULLY hold the terrarium at an upwards angle while planting your seeds it is easier to guide them into the correct positions.
- Put the entire terrarium inside of a sealed plastic bag or cover the small opening with saran wrap.
 - The seeds will sprout in about one to two weeks. Be sure to water weekly after sprouting.

FRAGRANT FLOWERS™

DuneCraft

GROWING AND CARE INSTRUCTIONS

The Double Bubble gives you more space and double the fun! Perfect for the office or home, these lush miniature landscapes are refreshing sights and make for relaxing scenery all year long. Everything you need to start the fun is contained in your kit. Now get growing and thanks for your purchase!

ALYSSUM

Tantalize your senses with the sweet smell of Alyssum. The flowers and fragrance will attract butterflies and hummingbirds. In medieval times, Alyssum was associated with cures for insanity, hence its old common name of Madwort. They will produce many seeds and will naturally spread themselves outdoors.

Growing Information

Germination is fairly rapid for Alyssum if the soil is kept moist and shaded until the plants sprout. Since the seeds are tiny, you only need to cover them with a bare layer of soil on top of them. Seeds will sprout in 10 – 14 days.

FORGET-ME-NOT

Forget-Me-Nots are known for their long bloom time and sky blue color that has long been a symbol of love. They used to be worked into rings to be worn as it was thought the wearers of the flower would not be forgotten by their lovers. Its name means true love. They were commonly used in Victorian Gardens.

Growing Information

This short-lived perennial, or biennial, has ovate to lance-shaped, velvety gray-green leaves to 4.5 inches long. Myriad saucer-shaped blue or white flowers with yellow eyes are born in clusters from spring to early summer. Forget-Me-Nots can be annual, in the sense that their life last for one year or it can be perennial, in the sense that their life - namely, germination, flowering, and death take more than two years. While planting seedlings, you do not have to be particularly careful about maintaining some distance between them because forget me nots grow well even if there is a crowd. Trim the blooms that are faded in order to encourage flowering.
